

ASTM D1781 Climbing Drum Peel Test

Applications:

ASTM D1781 -This test method is used to compare adhesion between flexible and rigid adherends, or between flexible facing of a sandwich structure and its core.

Comparisons of adhesives and processes are only applicable when test specimens and conditions are the same.

The peel resistance may indicate degree of cure for relatively brittle adhesives.

Parameter:

Model	HST-GPT204E
Standards	ASTM D1781, GB/T 1457
Capacity	3kN
Test Types	Sandwich
Temperature	0~40℃
