

HST-DYQ-1T Automatic Polishing Dropper

Introduction:

HST-DYQ-1T automatic polishing dropper can be used in various grinding and polishing machines, and the polishing liquid can be automatically dropped between the grinding plate and the loading plate to achieve the purpose of polishing. Using advanced microcontroller, it has the characteristics of compact structure, reliable operation and strong anti-interference ability.

1. Touch screen setting and automatic control
2. Set and accurately control drop speed
3. Set and control drop time
4. Automatic cleaning dropper
5. Can be connected to the grinding and polishing machine, which is automatically controlled by the grinding and polishing machine
6. The grinding and polishing machine one to many control (customized)
7. Polishing liquid magnetic stirring function, speed independent adjustment (optional)

Main parameters:

1. Can be even grinding polishing machine, automatically controlled by grinding polishing machine

2. Drip speed: about 1 drop/min -999 drops/min, can be continuously adjusted
3. Drip time: 1 second -999 minutes, can be adjusted continuously
4. Size: long * deep * high 170*200*260mm5
5. Weight: 5kg
6. Power supply: 220V, 100W
7. Random list

1 drip tube	1 manual
1 copy of certificate of conformity
